

## 50% TIME SAVINGS USING EXPERT ACCESSIBILITY SOLUTIONS

### Key Challenges

A healthcare insurance industry leader was struggling to make its annual enrolment kits compliant with ADA regulations within a short timeframe. As only manual processing was possible, it was prone to errors and time-intensive.

### The Williams Lea Solution

The Accessibility Solutions team at Williams Lea first analyzed the files to identify the causes of reverse text and accessibility errors. It then employed an Expert-in-the-Loop model by combining manual resources and technology to perform character encoding and eliminate reverse text issues.

### Outcomes Achieved

The client could comply with ADA standards within the stipulated timeframe as well as achieve:

- 50% projected time saving by using RRD RemediAd<sup>SM</sup>, a proprietary PDF accessibility production tool, instead of tagging the documents manually
- Access to easy-to-use kits
- Superior customer experience
- Greater inclusion
